Please add the following new claims:

36. A method for retrieving and displaying items of electronic information, comprising the steps of:

- scrolling a first display, which contemporaneously displays a first group of the items of electronic information, until a first item of the first group appears within a viewing panel and is proximate to an indicator that provides an indication of the selection of the first item, wherein the viewing panel extends along and defines a portion of the first display and a portion of a second display;
- moving the indicator along the viewing panel to the second display;
- and
- scrolling the second display, which contemporaneously displays a second group of the items of information, until a second item of the second group appears within the viewing panel and is associated with the indicator, so that the indicator provides an indication of the selection of the second item.
